Cross-Sensitivity Data

Notes: 1. All performance data is based on condition at 20°C, 50%RH & 1013mbar.For sensor performance data under other conditions, please contact us.

2. Connection should be made via PCB sockets only. Soldering to the pins will seriously damage the sensor

Gas	Concentration Used（ppm）	3H2-20000（ppm H2）
CO	100	60

Precautions：

1 .The sensor should be prevented from organic solvents or corrosive gases

2 .The sensor should not be stored in dusty, dirty areas and anaerobic environment

3 .The sensor must not be exposed to very high concentration of the analyte permanantly

4 .Excessive shock or vibration should be prevented to avoid internal damage

5 .The pins should not be broken or bent

6 .The working and reference electrodes should be in short-circuit condition in storage
